PAJUNK®

Individual Sets in Regional Anaesthesia

Immediately ready for use
PAJUNK® – All-in-one-Sets

The new PAJUNK® "All-in-one-Sets" will provide your work with greater efficiency. Because we will do all the work for you in putting together all the components required for an intervention, from the puncture set up to the fenestrated drape. You select and order the components you would like to have – and we will send you the "All-in-one-Set", completely organised in "one bundle", packed and sterilised.

This brochure is intended to support you in the selection of the components. You are thereby completely free to either order your set individually as you choose, or to resort to one of our standard "All-in-one-Set" indicated on the reverse side of this page. Simply follow the instructions in the grey bars and fill out the inquiry form on the fold-out flap.

For you, this means:
• plenty of time saved in the preparation
• no mistakes or mix-ups, and therefore more safety
• guaranteed sterility, and therefore a guarantee for hygiene

And this is how you can get your "All-in-one-Set"

Cannula Sets

Continuous control – StimuLong Sono: everything under control

In cooperation with Dr. Kick, PAJUNK® now presents the stimulatable StimuLong Sono Catheter as a further development of the StimuLong NanoLine.

This catheter is equipped with a stimulation tip, a conductive steel stylet, as well as with a integrated metal spiral.

**Perfect stimulation and conductivity – thanks to the rounded, gold-plated tip.**
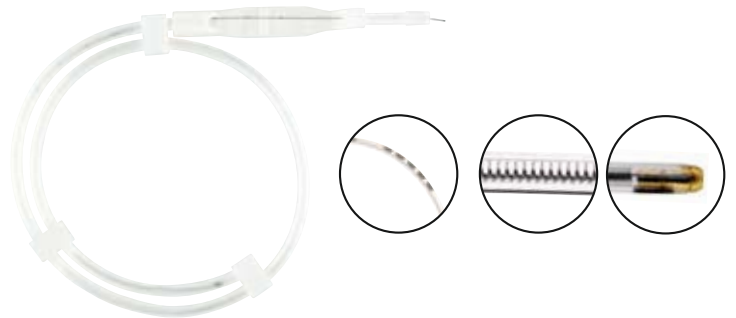

- Exact localization: Ultrasonically visible depth graduation and radiographic contrast strip
- Unhindered flow: Thanks to the integrated metal spiral
- Conductivity and stimulation – with the gold-plated, rounded tip

StimuLong Sono Set
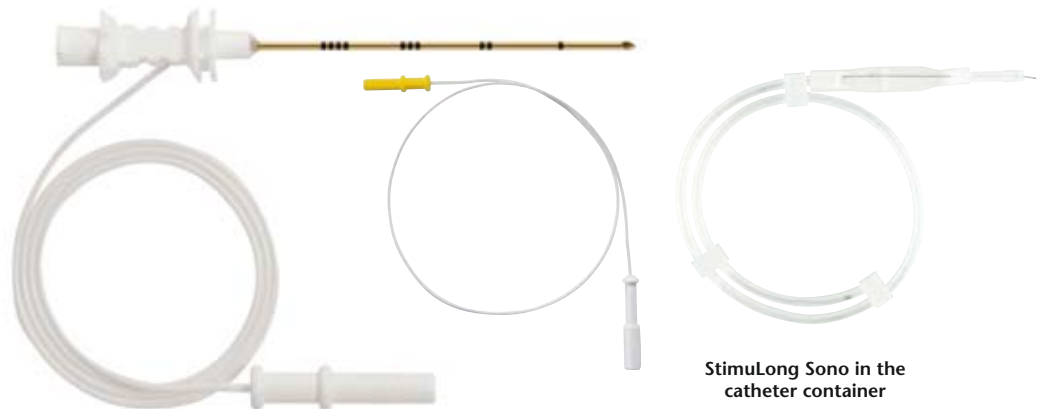

**StimuLong Sono in the catheter container**

Stimulatable clamping adapter

FixoLong system
for the fixation of the catheter and the filter

e.g. StimuLong Sono Set with facet tip *Item no. 531157-32A*

Tuohy cannula

Cannula with facet tip

Continuous Epidural Anaesthesia – EpiLong

PAJUNK® supports the modern form of Regional Anaestesia with sets for continuous epidural anaesthesia.
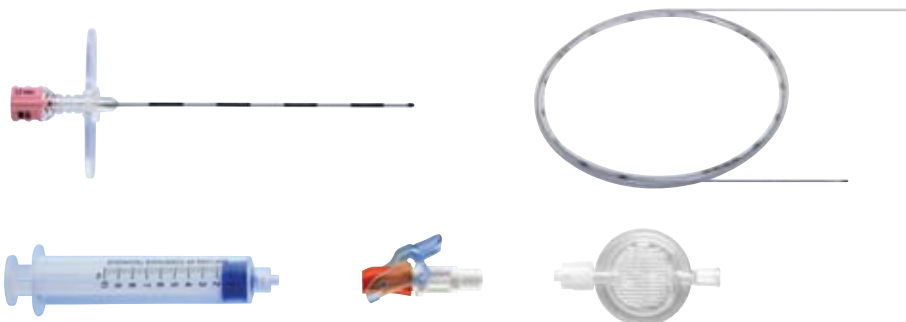

EpiLong Soft
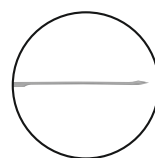

EpiLong Soft

In the EpiLong Soft Set, the Tuohy cannula is generally equipped with a metal stylet as a standard. This provides for more stability, particularly in cases of special lengths. The EpiLong Soft catheter with its integrated metal helical coil has been provided with a central orifice, it is very flexible and simultaneously resists buckling and creasing

e.g. EpiLong Set with Tuohy cannula with plastic stylet *Item no. 0331152-49*

EpiLong Tuohy

Tuohy cannula with plastic stylet
The Tuohy cannula of this set has been provided with a plastic stylet.

EpiLong catheter
The standard epidural catheter is alternatively available with a closed tip and lateral openings, or with a central orifice.

e.g. EpiLong Soft Set with metal stylet *Item no. 0421157-48*

Spinal Anaesthesia – SPROTTE® cannula

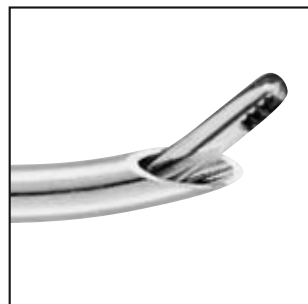

Developed by Professor Sprotte together with PAJUNK®, the SPROTTE® cannula will warrant an atraumatic puncture technique, thanks to its closed cannula tip in the shape of an ogive. The SPROTTE® cannula displaces the tissue of the dura mater without injuring it, and among other advantages, reduces post spinal headache to a minimum.

e.g. SPROTTE® Set *Item no. 121151-30A*
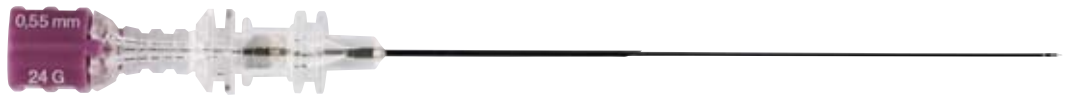

Stylet   cannula   introducer

The lateral opening in the vicinity of the cannula tip ensures the unhindered reflux of cerebrospinal fluid, and ensures the clear as well as fast identification of the subarachnoidal space. The anaesthetic can be evenly distributed in a subtle stream by way of the cannula tip, and is gentle to the fine neural structures.

SPROTTE® cannula with integrated magnifying effect

Even the smallest quantities of cerebrospinal fluid can be clearly detected by way of a viewing chamber in the hub of the cannula. For more safety and to save time.

Good orientation – PlexoLong NanoLine according to Meier

In cooperation with Dr. Meier, the PlexoLong Set has been especially developed for the peripheral techniques in regional anaesthesia and pain therapy. Following nerve stimulation, the catheter is advanced forward directly through the cannula.

While the facet tip cannula is exclusively placed parallel to the nerve, the SPROTTE® SPECIAL cannula and the Tuohy cannula are suitable for those cases, where it is necessary to introduce the catheter at an angle to the nerve.

There are 2 cannula types available to choose from:
• SPROTTE® SPECIAL cannula
• Cannula with facet tip

User-friendly introduction of the catheter after the nerve stimulation, directly through the cannula.
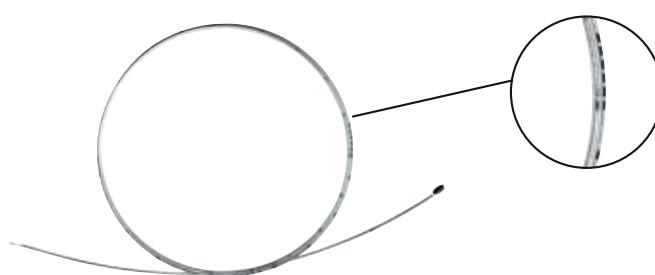

Radiografic catheter with ascending depth graduation for the exact determination of the position.

PlexoLong NanoLine Set

e.g. PlexoLong NanoLine Set *Item no. 531156-31B*
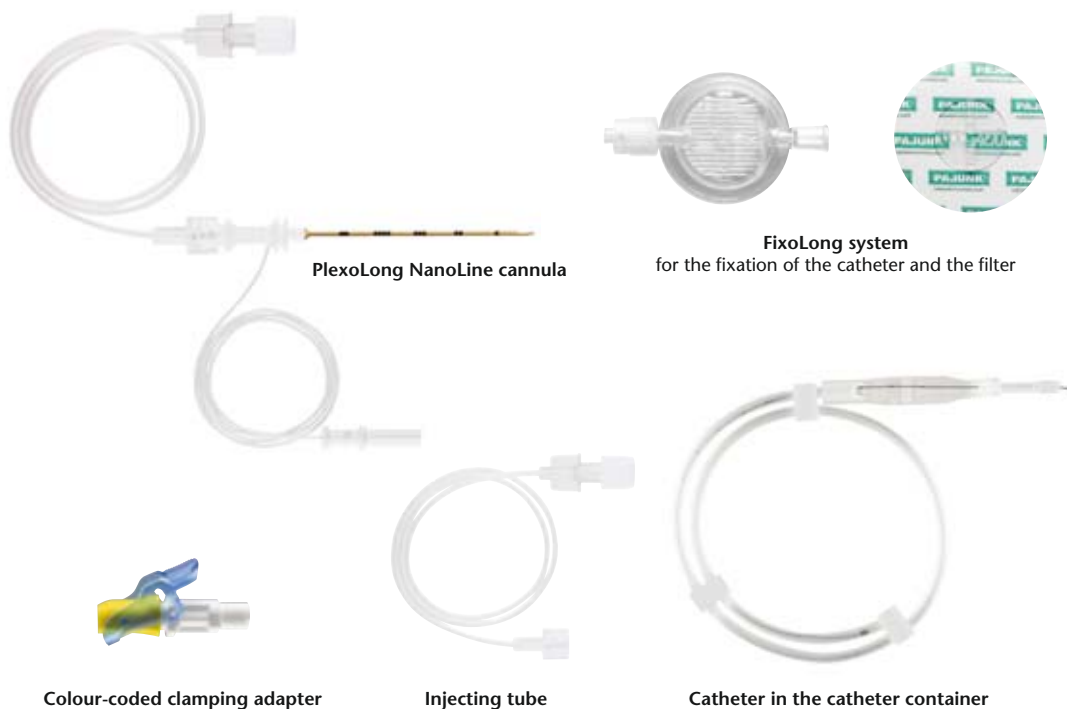

PlexoLong NanoLine cannula

FixoLong system

Catheter Fixation

**Adhesive bandages
in the sizes 5 x 7 cm and 10 x 12 cm**
Item no. 128570 and *Item no.128572*

FixoCath
Item no. 00115137ZB

Skin marker
Item no. 227065

FixoCath will guarantee for an absolutely safe fixation of the catheter with regard to creasing or buckling. This is achieved by attaching a foam-material cushion to the skin, which has been provided with a trough-shaped indentation along the centre line. The catheter is positioned in this indentation directly where it emerges and is affixed with an adhesive bandage. Creasing or buckling can therefore be excluded in full extent.
